## EDUCATION

**Dr. Vishwanath Karad MIT World Peace University (MIT-WPU)**

Pune, India

*B.Tech, Computer Science (Cyber Security & Data Forensics), CGPA: 9.16*

2023 – 2027

## EXPERIENCE

**Cyber Security Intern**

Mar 2025 – May 2025

*Ediglobe ([ediglobe.com](https://ediglobe.com))*

*Remote*

- Analysed real-world phishing campaigns and attack methodologies
- Implemented defences against common web vulnerabilities
- Developed a SQL-injection-resistant authentication system
- Strengthened applied knowledge in cyber defence strategies

## KEY PROJECTS

**Omniscient** | *AI-Powered Cyber Forensics Platform, LLMs, Web Scraping*

- Engineered a digital forensics platform leveraging LLMs, web scraping, and API reverse engineering.
- Automated intelligence extraction from social media platforms for cyber investigations.
- Significantly reduced manual investigation time through AI-assisted evidence collection and analysis.

**VACARS (IoT Project)** | *Voice-Assisted Context-Aware Response System, Raspberry Pi, Generative AI*

- Built an IoT-enabled voice-assisted system combining embedded AI and human-machine interaction.
- Integrated Raspberry Pi, real-time object detection, audio processing, and generative AI.
- Implemented an auto-actuated faceplate with an LED-based visual interface for interactive assistance.

**RakshaNetra** | *Proactive Data Leakage Prevention for LLMs and Web Platforms*

- Built a local-first system preventing sensitive enterprise data leakage to LLMs and web browsers.
- Developed a lightweight model for real-time text and image redaction of confidential information.
- Implemented pre-transmission interception to sanitize sensitive data before it leaves the device.

**BidForge** | *TypeScript, Bun, LangChain, MongoDB, AWS S3*

- Architected a multi-agent LLM pipeline (Parse, Explore, Summarise, Generate) using LangChain and Gemini 2.5 Flash for automated RFP analysis and proposal generation.
- Built a RAG-powered inventory matching system using HuggingFace embeddings and MongoDB Atlas Vector Search for semantic line-item matching.
- Automated proposal generation through a Markdown-to-PDF pipeline with AWS S3 integration, reducing proposal turnaround time from days to minutes.

## TECHNICAL SKILLS

**Programming:** C, C++, Python, Java

**Cybersecurity:** Penetration Testing, SQL Injection Mitigation, Phishing Analysis, Digital Forensics & Investigation

**AI & Systems:** LLM Integration, Computer Vision, Automation Pipelines, RAG

**Web Dev Stack:** MERN, TypeScript, HTML, CSS, Tailwind CSS

**Data & Big Data:** MySQL, PL/SQL, Hive, Hadoop, PySpark, Pig

**IoT & Embedded:** Raspberry Pi, Audio & Vision Sensors, Microcontrollers

**Cloud & Automation:** AWS, GCP, Docker, Kubernetes, Jenkins, CI/CD

## LEADERSHIP & ACHIEVEMENTS

**Patent Published:** ID-202521077464 for A System and Method for Dynamic Cybercrime Investigation Using Automated Data Extraction and Analysis

**Cureus (Springer Nature Journal Paper):** for Voice Assisted Context Aware Response System

**2nd Place, Ignisia 2026:** National Level Hackathon (April 2026)

**5th Place, Ciphathon:** National Level Hackathon (March 2026)

**2nd Place, RenAIssance:** Hosted by CSI MIT-WPU and WorqHat (January 2025)

**Speaker, DevConf 2025:** Talk on AI in CyberSecurity

**Certifications:** Oracle Cloud Foundations Associate; Cisco Endpoint Security

**Skills:** Strong leadership, communication, and team management
